

ADAM M. BUDNICK

OEM Sales Manager

Adam Budnick is the OEM Sales Manager for AbsolutAire. While he provides continuing support in product engineering and the company's DDC control technologies, Adam is primarily responsible for growing sales and direct-fired product applications in specific OEM markets. These include make-up air systems for the food-service industry and spray-and-bake systems for paint-finishing operations. Adam also has selected product sales responsibilities, such as carwash air-process dryers, construction heaters, door heaters, fan boxes, and burner boxes.

Adam has been with AbsolutAire since its inception in 1991, actually initiating product design and assembly drawings as his father, Jack W. Budnick, and Bob Jauch were in the process of incorporating the business and finalizing start-up plans. Adam was self-taught in AutoCad work and engineering principles, working part-time with another HVAC manufacturer. He assumed his role as a Sales & Engineering market development specialist in 2005.

A 1990 graduate of West Catholic High School in Grand Rapids, Mich., Adam has attended Aquinas College, Grand Rapids Community College, and Western Michigan University for selected, job-related studies. During his career, he has also participated in various industry or systems-specific training activities.

Adam balances his time-intensive work schedules with an active social life. He is challenged, along with his older brother Jack E., in helping to shape the company's continuing success as a second-generation family member. Adam is enthusiastic about the future, and he also enjoys spending time with family and friends, traveling and vacationing, golfing, and most other outdoor summer activities.
